👷 Engine Careers: Reading

Small Engines Overhaul · Unit 2 · Level 3 (closer to the class work) · goes with the Careers Assignment, career videos and Wyotech handout

Name: _____

Careers That Fix Engines

Engines are everywhere: cars, trucks, boats, mowers, chainsaws and farm machines. Each needs trained technicians. Auto technicians work on cars and light trucks. Diesel technicians repair trucks, buses and farm equipment. Small engine and outdoor power equipment technicians fix mowers, trimmers, chainsaws and ATVs, and marine technicians repair boat motors.

Most technicians train after high school. Technical colleges and schools like Wyotech offer one- to two-year programs. Apprenticeships let you learn a trade on the job while being paid. Certifications, such as ASE or manufacturer certificates, prove you have passed a skills test.

When you compare careers, look at the wage, the training needed, the working conditions and the job outlook. The Career Comparison Chart helps put this side by side.

Employers also want soft skills: showing up on time, working safely, keeping your area clean, being honest about mistakes and communicating with your team. Many shop supervisors say these habits matter as much as technical skill.
