📖 4-Stroke Theory & Engine Parts: Vocabulary Picture Cards (Level 2)

Name: _____

Cut on the dashed lines. Use the cards to match, sort, or quiz a partner.

Intake

Stroke 1: the piston moves down and the intake valve opens to pull in the air-fuel mix.

Compression

Stroke 2: the piston moves up with both valves closed and squeezes the mix.

Power

Stroke 3: the spark plug fires, the mix burns and pushes the piston down.

Exhaust

Stroke 4: the piston moves up and the exhaust valve opens to push burned gas out.

Piston

The round part that slides up and down in the cylinder.

Crankshaft

The shaft that changes the piston's up-and-down motion into spinning motion.

Valve

A part that opens and closes to let the mix in or exhaust out.

Flywheel

A heavy wheel on the crankshaft that keeps the engine turning smoothly and holds the magnets for the spark.
