🏡 Classroom & Greenhouse Basics: Reading

Horticulture 1 · Unit 0 · Level 3 (closer to the class work) · goes with syllabus quiz, safety contract, greenhouse map, Propagation Journal, Leadership Point Log

Name: _____

Welcome to the Greenhouse

Horticulture is the science and art of growing plants. It has several branches: pomology (fruit and nuts), olericulture (vegetables), floriculture (flowers) and landscape and nursery work. In this class you will grow plants in the school greenhouse and help sell them at plant sales.

A greenhouse is a building with clear walls and a clear roof. Sunlight passes through and warms the air and soil, and the walls hold that heat in. This controlled environment lets growers start plants early and grow them all year.

Safety comes first. Wear gloves when you handle soil, sap, fertilizer or rooting hormone. Never put plants, seeds, soil or berries in your mouth, because some greenhouse plants are poisonous. Sharp tools like pruners and knives are used only with an adult at the station, and they are counted back in when you finish.

During the semester you will keep a Propagation Journal. Each entry records the date, what you did, and what you observed. You will also earn 30 leadership points by helping at FFA events, greenhouse tours and plant sales.

Check your reading

1. Name two branches of horticulture and what they grow.

_____

_____

2. Why can plants grow all year in a greenhouse?

_____

_____

3. Give two greenhouse safety rules and the reason for each.
