📖 Parts of the Plant: Vocabulary Picture Cards (Level 2)

Name: _____

Cut on the dashed lines. Use the cards to match, sort, or quiz a partner.

Root

Grows underground, anchors the plant, and takes in water and minerals through root hairs.

Stem

Holds up leaves and flowers and carries water and food through xylem and phloem.

Leaf

The main job is photosynthesis: making food (sugar) from light, water and carbon dioxide.

Flower

The reproductive part. It makes seeds and fruit after pollination.

Photosynthesis

Water + carbon dioxide + light → sugar (food) + oxygen.

Pollination

Moving pollen from the stamen to the pistil, often by bees. It leads to seeds and fruit.

Xylem

Tubes in the stem that carry water and minerals up from the roots.

Phloem

Tubes that carry food (sugar) through the plant.

Stomata

Tiny openings, mostly under the leaf, for gas exchange and transpiration (giving off water).
