🥄 Measuring & Function of Ingredients: Reading · ANSWER KEY

Culinary 1 · Unit 2 · Level 3 (closer to the class work) · goes with Measuring & Function of Ingredients (cookies PowerPoint and vocab sheet)

Name: _____

Measure It Right

Baking is like science: the amounts matter. Before you start, do mise en place, which means “everything in its place.” Read the recipe and set out all of your tools and ingredients.

Know your measurements: 3 teaspoons = 1 tablespoon, 16 tablespoons = 1 cup, and 1 cup = 8 fluid ounces. Recipes use short forms: tsp is teaspoon, Tbsp is tablespoon, c is cup and oz is ounce.

Measure liquids like milk and water in a clear liquid measuring cup on the counter and read it at eye level. Measure flour in a dry measuring cup: fluff the flour, spoon or scoop it in, then level it off with a straight edge. Brown sugar is packed firmly into the cup.

Each ingredient has a job. Flour gives structure and holds the food together. Fat (butter or shortening) makes it tender and adds flavor. Sugar makes it sweet and helps it brown. Eggs add moisture and structure. Baking soda and baking powder are leavening agents that make gas so the food rises. Salt adds flavor.

In the creaming method you beat fat and sugar with a mixer until light and fluffy, which adds air to cookies and cakes. Parchment paper on the pan keeps cookies from sticking.

Check your reading

1. What does mise en place mean, and why do it?
Everything in its place; you have everything ready so you don't miss a step.
2. How do you measure flour?
Fluff, scoop or spoon in, level off.
3. What is the job of baking powder?
Leavening: makes gas so food rises.
