👩‍🏫 Staff Guide · Biology A · Food & Digestion (Level 3)

Level 3 = resource-room students who can work close to the gen ed lesson. Same topics and order as Ms. Dunham's class; more reading and writing than Level 2.

1. How the pieces line up

Class lesson	Level 3 piece
A4 Food molecules notes + food reading + Food Cards	Reading parts 1-2; notes section A
A2 Digestion video + digestive system reading/diagram	Reading parts 3-4; notes section B
Crash Course biomolecules	Notes section C; quick check + unit game

2. Supports built in

- Reading and notes each have a web copy with a 🔊 Read aloud button (highlights as it reads)
- Key-word box at the top of the notes; word problems have a worked example first
- Less filled in than Level 2: short answers, tables, a drawing
- No slide decks: students follow Ms. Dunham's slides with the Level 3 notes

3. Files

- Reading (+ 🔊 web copy)
- Guided notes + key (+ 🔊 web copy)
- Quick check + key
- Unit game: 10 questions

4. What to grade

- Guided notes stand in for the matching class notes or worksheet (same points when complete)
- Quick check: score it, then scale to the class quiz points
- Reading check questions: completion points
- Modified grading only as the IEP allows. Check with the case manager.

5. Who to ask

- Mr. Driver (SLE): changes and IEP questions.
- Class content: Ms. Dunham.

🍎 Food & Digestion: Guided Notes

Biology A · Unit 4 · Level 3 (closer to the class work) · goes with Unit 3 Diabetes: A2 Digestion, A4 food molecules notes + reading + Food Cards, digestive system reading + diagram

Name: _____

Use the class slides and your reading. Key words:

carbohydrate | *lipid* | *protein* | *glucose* | *amino acid* | *starch* | *fiber* | *saliva* | *small intestine*

A. Food molecules (A4 Part 1)

1. Fill in the table.

Macromolecule	Building block	Food example
Carbohydrate		
Lipid		
Protein		

2. Plants store glucose as _____; animals store it as glycogen.

3. Fiber is _____.

B. Digestive organs (A2 + reading)

4. Saliva starts breaking down _____.

5. The _____ pushes food to the stomach.

6. The _____ makes bile to help digest fats.

7. List the path of food from mouth to large intestine.

_____

_____

C. Putting it together

8. You eat a turkey sandwich. Which macromolecules are in it, and what does each become?

_____

_____

_____

🍎 Food & Digestion: Reading

Biology A · Unit 4 · Level 3 (closer to the class work) · goes with Unit 3 Diabetes: A2 Digestion, A4 food molecules notes + reading + Food Cards, digestive system reading + diagram

Name: _____

What Happens to Your Lunch

Food is made of three main macromolecules. Carbohydrates are sugars and starches, built from glucose. Lipids are fats and oils, built from glycerol and fatty acids. Proteins are chains of amino acids; there are 20 kinds. Each big molecule is made of smaller building blocks.

Starch is hundreds of glucose molecules linked together; plants store energy this way. Animals store glucose as glycogen. Cellulose (fiber) is also made of glucose, but our bodies cannot digest it, so it passes through. Extra carbohydrates and extra protein can be stored as fat.

Digestion breaks big food molecules into building blocks small enough to enter the blood. It starts in the mouth: teeth chew and saliva from the salivary glands begins to break down starch. Muscles in the esophagus push food to the stomach, a muscle bag that churns food with acid and enzymes.

Digestion finishes in the small intestine, where nutrients pass into the blood. The liver makes bile to help break up fats, and the pancreas makes digestive enzymes and the hormone insulin. The large intestine absorbs water, and waste leaves the body.

Knowing the building blocks helps explain diabetes later in this unit: carbohydrates become glucose in the blood, and the body has to manage that glucose.

Check your reading

1. What are the building blocks of proteins?

_____

_____

2. Why does fiber pass through us?

_____

_____

3. Where do nutrients go into the blood?

_____

_____

🍎 Food & Digestion: Quick Check

Biology A · Unit 4 · Level 3 (closer to the class work) · goes with Unit 3 Diabetes: A2 Digestion, A4 food molecules notes + reading + Food Cards, digestive system reading + diagram

Name: _____

Multiple choice and short answer. You may have it read aloud.

1. Proteins are made of…

A. Amino acids | B. Glucose | C. Fatty acids only

2. Which food is mostly carbohydrate?

A. Butter | B. Eggs | C. Bread

3. Digestion finishes in the…

A. Esophagus | B. Mouth | C. Small intestine

4. The pancreas makes…

A. Bile | B. Enzymes and insulin | C. Saliva

5. What does the stomach do?

6. Why does the body need to break food into small molecules?

🍎 Food & Digestion: Guided Notes · ANSWER KEY

Biology A · Unit 4 · Level 3 (closer to the class work) · goes with Unit 3 Diabetes: A2 Digestion, A4 food molecules notes + reading + Food Cards, digestive system reading + diagram

Name: _____

Use the class slides and your reading. Key words:

carbohydrate | *lipid* | *protein* | *glucose* | *amino acid* | *starch* | *fiber* | *saliva* | *small intestine*

A. Food molecules (A4 Part 1)

1. Fill in the table.

Macromolecule	Building block	Food example
Carbohydrate	**glucose**	**bread, rice**
Lipid	**glycerol + fatty acids**	**butter, oil**
Protein	**amino acids**	**eggs, beans, meat**

2. Plants store glucose as **starch**; animals store it as glycogen.

3. Fiber is **cellulose**.

B. Digestive organs (A2 + reading)

4. Saliva starts breaking down **starch**.

5. The **esophagus** pushes food to the stomach.

6. The **liver** makes bile to help digest fats.

7. List the path of food from mouth to large intestine.
Mouth → esophagus → stomach → small intestine → large intestine.

C. Putting it together

8. You eat a turkey sandwich. Which macromolecules are in it, and what does each become?
Bread: carbohydrate → glucose; turkey: protein → amino acids; mayo/butter: lipid → glycerol + fatty acids.

🍎 Food & Digestion: Reading · ANSWER KEY

Biology A · Unit 4 · Level 3 (closer to the class work) · goes with Unit 3 Diabetes: A2 Digestion, A4 food molecules notes + reading + Food Cards, digestive system reading + diagram

Name: _____

What Happens to Your Lunch

Food is made of three main macromolecules. Carbohydrates are sugars and starches, built from glucose. Lipids are fats and oils, built from glycerol and fatty acids. Proteins are chains of amino acids; there are 20 kinds. Each big molecule is made of smaller building blocks.

Starch is hundreds of glucose molecules linked together; plants store energy this way. Animals store glucose as glycogen. Cellulose (fiber) is also made of glucose, but our bodies cannot digest it, so it passes through. Extra carbohydrates and extra protein can be stored as fat.

Digestion breaks big food molecules into building blocks small enough to enter the blood. It starts in the mouth: teeth chew and saliva from the salivary glands begins to break down starch. Muscles in the esophagus push food to the stomach, a muscle bag that churns food with acid and enzymes.

Digestion finishes in the small intestine, where nutrients pass into the blood. The liver makes bile to help break up fats, and the pancreas makes digestive enzymes and the hormone insulin. The large intestine absorbs water, and waste leaves the body.

Knowing the building blocks helps explain diabetes later in this unit: carbohydrates become glucose in the blood, and the body has to manage that glucose.

Check your reading

1. What are the building blocks of proteins?
Amino acids.

2. Why does fiber pass through us?
It is cellulose, which our bodies cannot digest.

3. Where do nutrients go into the blood?
The small intestine.

🍎 Food & Digestion: Quick Check · ANSWER KEY

Biology A · Unit 4 · Level 3 (closer to the class work) · goes with Unit 3 Diabetes: A2 Digestion, A4 food molecules notes + reading + Food Cards, digestive system reading + diagram
