👩‍🏫 Staff Guide · Biology A · Final Review (Level 3)

Level 3 = resource-room students who can work close to the gen ed lesson. Same topics and order as Ms. Dunham's class; more reading and writing than Level 2.

1. How the pieces line up

Class lesson	Level 3 piece
Final review (10 pts)	Reading + guided notes (one-page review of every unit)
Final Exam (80 pts, paper)	Quick check for practice + unit game; use the IEP test accommodations on the exam

2. Supports built in

- Reading and notes each have a web copy with a 🔊 Read aloud button (highlights as it reads)
- Key-word box at the top of the notes; word problems have a worked example first
- Less filled in than Level 2: short answers, tables, a drawing
- No slide decks: students follow Ms. Dunham's slides with the Level 3 notes

3. Files

- Reading (+ 🔊 web copy)
- Guided notes + key (+ 🔊 web copy)
- Quick check + key
- Unit game: 10 questions

4. What to grade

- Guided notes stand in for the matching class notes or worksheet (same points when complete)
- Quick check: score it, then scale to the class quiz points
- Reading check questions: completion points
- Modified grading only as the IEP allows. Check with the case manager.

5. Who to ask

- Mr. Driver (SLE): changes and IEP questions.
- Class content: Ms. Dunham.

🏁 Final Review: Guided Notes

Biology A · Unit 8 · Level 3 (closer to the class work) · goes with End of semester: Final review + Final Exam

Name: _____

Use the class slides and your reading. Key words:

hypothesis | *variable* | *biomagnification* | *photosynthesis* | *respiration* | *biodiesel* | *exothermic* | *insulin* | *fossil*

A. Skills and orcas

1. The variable you measure is the _____ variable.
2. Toxins get more concentrated up a food chain: _____.
3. Name the three threats to the Southern Residents.

_____

B. Photosynthesis vs respiration

4. Fill in the table.

	Photosynthesis	Respiration
Inputs		
Outputs		
Where		

C. Energy, diabetes, fossils

5. A reaction that releases heat is _____.
6. The hormone that lets glucose into cells is _____.
7. Deeper rock layers are _____.
8. Pick your favorite unit. Write two facts you will remember.

_____

_____

🏁 Final Review: Reading

Biology A · Unit 8 · Level 3 (closer to the class work) · goes with End of semester: Final review + Final Exam

Name: _____

The Semester in Five Big Ideas

Science skills: goggles go on for chemicals, heat and glass, and every accident is reported. A hypothesis is a testable prediction (If… then… because…). The independent variable is what you change; the dependent variable is what you measure.

Orcas: the Southern Residents (J, K and L pods) eat Chinook salmon. PCBs biomagnify up the food web and are stored in blubber. Boat noise blocks echolocation, so hunting takes more energy.

Photosynthesis and respiration are partners. Photosynthesis (in chloroplasts): carbon dioxide + water + light → glucose + oxygen. Cellular respiration (in mitochondria): glucose + oxygen → carbon dioxide + water + ATP.

Energy and biofuel: algae store energy as oil (lipids), which can become biodiesel, a renewable fuel. Exothermic reactions release heat; endothermic reactions take in heat. The carbon cycle moves carbon among air, living things and fuels.

Food, diabetes and fossils: carbohydrates become glucose; insulin lets glucose into cells to keep blood sugar in balance (homeostasis). In type 1 diabetes the body makes little or no insulin; in type 2 cells do not respond well. Fossils form by fast burial in fine sediment, and deeper rock layers are older.

Check your reading

1. Compare the inputs and outputs of photosynthesis and respiration.

2. Why do orcas have the most PCBs?

3. What does insulin do?

🏁 Final Review: Quick Check

Biology A · Unit 8 · Level 3 (closer to the class work) · goes with End of semester: Final review + Final Exam

Name: _____

Multiple choice and short answer. You may have it read aloud.

1. The dependent variable is what you…

A. Measure | B. Change | C. Ignore

2. Photosynthesis makes…

A. CO_2 and water | B. ATP only | C. Glucose and oxygen

3. Biodiesel is renewable because…

A. It is made from coal | B. It never burns | C. Algae and plants grow back fast

4. Type 1 diabetes means the body…

A. Makes too much glucose from rocks | B. Makes little or no insulin | C. Cannot digest fiber

5. Fossils are most likely to form when an organism is…

A. Buried quickly | B. Left in the sun | C. Eaten

6. Explain how photosynthesis and respiration are connected.

🏁 Final Review: Guided Notes · ANSWER KEY

Biology A · Unit 8 · Level 3 (closer to the class work) · goes with End of semester: Final review + Final Exam

Name: _____

Use the class slides and your reading. Key words:

hypothesis | *variable* | *biomagnification* | *photosynthesis* | *respiration* | *biodiesel* | *exothermic* | *insulin* | *fossil*

A. Skills and orcas

1. The variable you measure is the **dependent** variable.
2. Toxins get more concentrated up a food chain: **biomagnification** .
3. Name the three threats to the Southern Residents.
Lack of salmon, toxins (PCBs), boat noise.

B. Photosynthesis vs respiration

4. Fill in the table.

	Photosynthesis	Respiration
Inputs	**CO2 + water + light**	**glucose + oxygen**
Outputs	**glucose + oxygen**	**CO2 + water + ATP**
Where	**chloroplasts**	**mitochondria**

C. Energy, diabetes, fossils

5. A reaction that releases heat is **exothermic** .
6. The hormone that lets glucose into cells is **insulin** .
7. Deeper rock layers are **older** .
8. Pick your favorite unit. Write two facts you will remember.
Answers vary; two correct facts from one unit.

🔑 *Key written by our team from Ms. Dunham's materials, please check.*

🏁 Final Review: Reading · ANSWER KEY

Biology A · Unit 8 · Level 3 (closer to the class work) · goes with End of semester: Final review + Final Exam

Name: _____

The Semester in Five Big Ideas

Science skills: goggles go on for chemicals, heat and glass, and every accident is reported. A hypothesis is a testable prediction (If… then… because…). The independent variable is what you change; the dependent variable is what you measure.

Orcas: the Southern Residents (J, K and L pods) eat Chinook salmon. PCBs biomagnify up the food web and are stored in blubber. Boat noise blocks echolocation, so hunting takes more energy.

Photosynthesis and respiration are partners. Photosynthesis (in chloroplasts): carbon dioxide + water + light → glucose + oxygen. Cellular respiration (in mitochondria): glucose + oxygen → carbon dioxide + water + ATP.

Energy and biofuel: algae store energy as oil (lipids), which can become biodiesel, a renewable fuel. Exothermic reactions release heat; endothermic reactions take in heat. The carbon cycle moves carbon among air, living things and fuels.

Food, diabetes and fossils: carbohydrates become glucose; insulin lets glucose into cells to keep blood sugar in balance (homeostasis). In type 1 diabetes the body makes little or no insulin; in type 2 cells do not respond well. Fossils form by fast burial in fine sediment, and deeper rock layers are older.

Check your reading

1. Compare the inputs and outputs of photosynthesis and respiration.
They are opposites: photosynthesis uses CO2 + water + light to make glucose + oxygen; respiration uses glucose + oxygen to make CO2 + water + ATP.

2. Why do orcas have the most PCBs?
Biomagnification: they are at the top of the food web.

3. What does insulin do?
Lets glucose into cells, lowering blood sugar.

🏁 Final Review: Quick Check · ANSWER KEY

Biology A · Unit 8 · Level 3 (closer to the class work) · goes with End of semester: Final review + Final Exam

Name: _____

Multiple choice and short answer. You may have it read aloud.

1. The dependent variable is what you…

A. Measure | B. Change | C. Ignore

2. Photosynthesis makes…

A. CO_2 and water | B. ATP only | **C. Glucose and oxygen**

3. Biodiesel is renewable because…

A. It is made from coal | B. It never burns | **C. Algae and plants grow back fast**

4. Type 1 diabetes means the body…

A. Makes too much glucose from rocks | **B. Makes little or no insulin** | C. Cannot digest fiber

5. Fossils are most likely to form when an organism is…

A. Buried quickly | B. Left in the sun | C. Eaten

6. Explain how photosynthesis and respiration are connected.

The outputs of one are the inputs of the other (glucose + oxygen ↔ CO_2 + water).
