👩‍🏫 Staff Guide · Health · Unit 2 Food & Nutrition (Level 3)

Level 3 = students who can work close to the gen ed lesson. No slide decks: students follow Mr. Finstuen's lesson with Level 3 readings and guided notes (both have a 🔊 read-aloud copy online).

1. How the pieces line up

Gen ed lesson	Level 3 piece
Nutrient Notes; Nutrition Vocabulary; Macro and Micronutrients; Nutrients Research Worksheet	Reading paragraphs 1-2; notes part A (nutrient table, fats)
Digestive system; Healthy Eating Plate Interactive; Design A Healthy Plate	Reading paragraph 3; notes part B (draw and label the plate)
Whole Foods & Farm to Fork; Sugar; Nutrition Labels; Meal Planning	Reading paragraphs 4-5; notes part C (sugar math, labels, plan a dinner)
Food documentary questions	Do his questions with a partner; staff pauses the video at each answer

2. Supports built in

- Reading + notes have a 🔊 read-aloud copy online
- Sugar math has a worked example first; calculator OK
- Plate diagram can be drawn or cut-and-glued

3. What to grade

- Notes stand in for Nutrient Notes and the Nutrients Research Worksheet
- Quick check: score, then scale to class points
- Modified grading only as the IEP allows. Check with the case manager.

4. Who to ask

- Mr. Driver (SLE): changes and IEP questions.
- Facts we could not confirm say “check with Mr. Finstuen”.

🚧 Under construction (check with Mr. Finstuen)

- **Nutrient Notes Kami pages + Nutrients Research Worksheet**: Turned in through an outside tool (Kami), so the pages are not in the export. Our notes follow his calendar topics.
- **Digestive system coloring sheet (12 parts)**: Not in the export. We use a public-domain labeled diagram instead.
- **Food documentary + Secrets of Your Gut excerpts**: Videos shown in class; titles and times are not in the export.

💗 Sensitive topic note

Food can be a hard topic. Some students live with food insecurity, and some have a difficult relationship with food or eating. Mr. Finstuen's unit opens by saying so. Never comment on what or how much a student eats, and never ask students to log what they eat. Meal plans can use any family or pretend menu. If you worry about a student's eating, tell Mr. Driver and the school counselor.

🥗 Food & Nutrition: Guided Notes

Health · Unit 2 · Level 3 (closer to the class work) · goes with the Food & Nutrition module (Nutrient Notes, Healthy Eating Plate, Labels, Sugar, Whole Foods, Meal Planning)

Name: _____

Use the class slides and your reading. Key words:

macronutrient *micronutrient* *carbohydrate* *protein* *unsaturated fat* *saturated fat* *trans fat* *small intestine* *gut microbiome* *whole grain* *whole food* *processed food* *added sugar* *% Daily Value*

A. Nutrients

1. Fill in the table.

Nutrient	Macro or micro?	Main job	Food example
Carbohydrate			
Protein			
Fat			
Calcium			

2. Explain the difference between unsaturated, saturated and trans fats.

B. Digestion and the plate

3. Most nutrients are absorbed into the blood in the _____.

4. Draw a plate and label the four sections of the Healthy Eating Plate with their sizes. Add the drink.

C. Labels, sugar and meal planning

5. **Sugar math**

> 1 teaspoon of sugar ≈ 4 grams
> Example: 20 g ÷ 4 = 5 teaspoons

a) A 12 oz soda has 40 g of added sugar. Teaspoons? _____

b) A 20 oz soda has 64 g. Teaspoons? _____

c) The daily limit is 26 g. How many grams over is the 20 oz soda? _____

6. On a label, 5% Daily Value or less is _____ and 20% or more is _____.

7. Plan one dinner using the Healthy Eating Plate. List each food and which section it fills.

_____

_____

_____

🥗 Food & Nutrition: Reading

Health · Unit 2 · Level 3 (closer to the class work) · goes with the Food & Nutrition module (Nutrient Notes, Healthy Eating Plate, Labels, Sugar, Whole Foods, Meal Planning)

Name: _____

Fueling Your Body

Nutrients are the parts of food your body uses to live and grow. Macronutrients are needed in large amounts: carbohydrates (the main energy source), protein (builds and repairs muscle and helps the immune system) and fat (stores energy and builds cells). Water is also essential. Micronutrients, vitamins and minerals, are needed in small amounts, such as calcium for bones and iron for blood.

Not all fats are the same. Unsaturated fats, found in olive oil, nuts and fish, are healthier. Saturated fats, found in butter, cheese and red meat, should be limited. Trans fats, from partially hydrogenated oils, are the most harmful and should be avoided.

The Harvard Healthy Eating Plate is a guide for balanced meals. Half the plate is vegetables and fruit (potatoes do not count as vegetables because they raise blood sugar quickly). A quarter is whole grains such as oats, brown rice and whole wheat. A quarter is healthy protein such as fish, poultry, beans and nuts. Use healthy oils, drink water, tea or coffee, skip sugary drinks, and stay active.

A whole food has one ingredient, itself, and you can picture it growing. Processed foods are changed a lot and often have added sugar, salt and fat. Food travels from the farm to processing, then by truck, ship or plane to a store and finally to your plate. Cooking at home with whole ingredients is often healthier and cheaper.

Added sugar hides in many foods under more than 60 names. Too much is linked to heart disease, type 2 diabetes and liver disease. The World Health Organization recommends no more than about 26 grams (6 teaspoons) of added sugar a day; one teaspoon is about 4 grams. A 12-ounce soda has about 38 to 44 grams. The Nutrition Facts label shows the serving size, calories and added sugars, and the % Daily Value: 5% or less is low, and 20% or more is high.

Check your reading

1. Why should trans fats be avoided?

2. Why don't potatoes count as vegetables on the Healthy Eating Plate?

3. What two questions help you decide if a food is a whole food?

🥗 Food & Nutrition: Quick Check

Health · Unit 2 · Level 3 (closer to the class work) · goes with the Food & Nutrition module (Nutrient Notes, Healthy Eating Plate, Labels, Sugar, Whole Foods, Meal Planning)

Name: _____

Multiple choice and short answer. You may have it read aloud.

1. Which nutrient is the body's main source of energy?

A. Calcium | B. Vitamin C | C. Carbohydrates

2. Which fat is the most harmful?

A. Trans fat | B. Unsaturated fat | C. Fat in fish

3. What fills one quarter of the Healthy Eating Plate?

A. Vegetables and fruit | B. Sugary drinks | C. Whole grains

4. A food label shows 3% Daily Value for sodium. This is…

A. Low | B. High | C. Unsafe

5. A sports drink has 36 g of added sugar. How many teaspoons is that? Is it under the 26 g daily limit?

6. Give two reasons cooking at home with whole foods can be healthier.

🥗 Food & Nutrition: Guided Notes · ANSWER KEY

Health · Unit 2 · Level 3 (closer to the class work) · goes with the Food & Nutrition module (Nutrient Notes, Healthy Eating Plate, Labels, Sugar, Whole Foods, Meal Planning)

Name: _____

Use the class slides and your reading. Key words:

macronutrient · *micronutrient* · *carbohydrate* · *protein* · *unsaturated fat* · *saturated fat* · *trans fat* · *small intestine* · *gut microbiome* · *whole grain* · *whole food* · *processed food* · *added sugar* · *% Daily Value*

A. Nutrients

1. Fill in the table.

Nutrient	Macro or micro?	Main job	Food example
Carbohydrate	**macro**	**energy**	**oats, rice**
Protein	**macro**	**build/repair muscle**	**beans, fish**
Fat	**macro**	**stored energy, cells**	**olive oil, nuts**
Calcium	**micro**	**strong bones**	**milk, greens**

2. Explain the difference between unsaturated, saturated and trans fats.
Unsaturated (olive oil, nuts, fish) healthiest; saturated (butter, red meat) limit; trans (partially hydrogenated oil) avoid.

B. Digestion and the plate

3. Most nutrients are absorbed into the blood in the **small intestine** .

4. Draw a plate and label the four sections of the Healthy Eating Plate with their sizes. Add the drink.
½ vegetables and fruit, ¼ whole grains, ¼ healthy protein; water on the side.

C. Labels, sugar and meal planning

5. **Sugar math**

> 1 teaspoon of sugar ≈ 4 grams
> Example: 20 g ÷ 4 = 5 teaspoons

a) A 12 oz soda has 40 g of added sugar. Teaspoons? **10 tsp**

b) A 20 oz soda has 64 g. Teaspoons? **16 tsp**

c) The daily limit is 26 g. How many grams over is the 20 oz soda? **38 g over**

6. On a label, 5% Daily Value or less is **low** and 20% or more is **high** .

7. Plan one dinner using the Healthy Eating Plate. List each food and which section it fills.
Answers vary; must include vegetables/fruit, whole grain, protein, water.

🔑 *Key written by our team from Mr. Finstuen's worksheets and slides, please check.*

🥗 Food & Nutrition: Quick Check · ANSWER KEY

Health · Unit 2 · Level 3 (closer to the class work) · goes with the Food & Nutrition module (Nutrient Notes, Healthy Eating Plate, Labels, Sugar, Whole Foods, Meal Planning)

Name: _____

Multiple choice and short answer. You may have it read aloud.

1. Which nutrient is the body's main source of energy?

A. Calcium | B. Vitamin C | **C. Carbohydrates**

2. Which fat is the most harmful?

A. Trans fat | B. Unsaturated fat | C. Fat in fish

3. What fills one quarter of the Healthy Eating Plate?

A. Vegetables and fruit | B. Sugary drinks | **C. Whole grains**

4. A food label shows 3% Daily Value for sodium. This is…

A. Low | B. High | C. Unsafe

5. A sports drink has 36 g of added sugar. How many teaspoons is that? Is it under the 26 g daily limit?

9 teaspoons; no, it is 10 g over the limit.

6. Give two reasons cooking at home with whole foods can be healthier.

Less added sugar, salt and fat; you control ingredients and portions; more whole foods; often cheaper.
