📖 Electric Forces: Vocabulary Picture Cards (Level 2)

Name: _____

Cut on the dashed lines. Use the cards to match, sort, or quiz a partner.

Attract

Pull toward each other. Opposite charges (+ and −) attract.

Repel

Push away from each other. Like charges (− and −, or + and +) repel.

Electric force

The push or pull between charged objects. It works without touching.

Distance

How far apart two objects are. Closer = stronger force.

Amount of charge

How many extra or missing electrons. More charge = stronger force.

Polarized

Electrons in a neutral object shift to one side, so one side is a little − and the other a little +.

Coulomb's law

The rule for electric force: more charge makes it stronger; more distance makes it much weaker.

Scientific notation

A short way to write very big or small numbers, like $2 \times 10^{12} = 2{,}000{,}000{,}000{,}000$.
